The Business Demography dataset from ONS helps provide an indication of the state of the local and national economy.

The statistics for Bournemouth illustrated in the chart above reveal the drop in the number of active enterprises since 2007. However in 2012 the number of active enterprises increased and continued to grow since 2013. In addition the number of births has exceeded firms de-registering (deaths) in 2011-2017 following two years of the reverse.

The statistics also look at the survival rate of firms. Nationally the five-year survival rates for firms suggest rates are not as good as the previous figures however locally figures suggest an improvement.

Employer Demography looks just at firms that have employees so is a smaller count than all Enterprises
